

Knife gate valve SLF

Heavy duty push through slurry knife gate valve

Size range: DN 80 - DN 600 (3" - 24")

About SLF

Stafsjö's heavy duty SLF is a push through slurry knife gate valve with superior flow characteristics, offering reliable and bi-directional shut-off performance in the most abrasive and demanding mineral processing applications.

The SLF valve is modular designed and it can easily be customized with actuators and related automation accessories to different process conditions. The valve is also available with mechanical lock out. As standard, the SLF is supplied with a flanged robust precision machined nodular iron valve body up to DN 400 and larger sizes features heavy duty two-piece fully lugged versions. The strong duplex gate is special grinded with purpose of reducing the friction when it cycles through the valve's rubber seats.

In addition to this slurry valve Stafsjö also offers the compact SLV up to DN 900 and two high pressure versions, the SLH and SLX, available in pressure class up to 50 bar.

A precise gate alignment extend the service life

A solid top works (1), a robust gland box system (2) and precision machined gate supports (3) ensure precise gate alignment throughout the full stroke, thus reducing stress and wear on seats.

Reinforcements rings ensure stability and performance

The front reinforcement rings (4) ensure the seats shape, position and strength remain during operation while the flange sealing reinforcements (5) secure a tight and exact position of the seats towards the gate and connecting flanges.

Expansion areas reduce stress and actuation force

The seat entrance area (6) is designed to give a smooth gate entry and the expansion areas (7) allows the seat to be axially flexible with minimal actuator force.

Pressure class

| Max working pressure at 20 °C | | Max differential pressure at 20 °C | | | | | |
|-------------------------------|-----|------------------------------------|-----|--|--|--|--|
| DN | bar | DN | bar | | | | |
| 80 - 600 | 10 | 80 - 400 | 10 | | | | |
| | | 450 - 600 | 6 | | | | |

Configurations

Standard

Sizes: DN 80 - DN 600

Valve body: Nodular iron EN 5.3105

Gate: Duplex stainless steel EN 1.4462, S32205 **Box packing:** TwinPack with UHMW-PE scraper

Top works: Stainless steel tie rods encapsulated in aluminum beams up to DN 300 and coated steel EN 1.0038 beams on larger sizes, including stainless steel gate guards on automated valves.

Options

Valve body1)

Nodular iron EN 5.3105

Gate material

Duplex stainless steel EN 1.4462, S32205

Seats

EPDM

Natural rubber

Box packings

TwinPack with scraper in UHMW-PE

Top works

Stainless steel tie rods encapsulated in aluminum beams

Steel EN 1.0038 ≥ DN 350 Stainless steel beams Actuators

Hand wheel with rising stem

Hand lever Bevel gear

Double-acting pneumatic cylinders Single-acting pneumatic cylinders

Electric actuators Hydraulic actuator

Flange drillings

EN 1092 PN 10

ASME/ANSI B16.5 Class 150 series A

AS 2129 Table D and E

Accessories

See p. 8 and our accessory data sheet for further information.

Design standards

Design, manufacturing, inspection and test

According to pressure equipment directive 2014/68/EU category I and II module A2. The valves are CE marked when it is applicable.

Stafsjö's valves are subject for pressure tests before delivery in opened and closed position with water at 20 °C according to EN 12266-1:2003 rate A. No visually detectable leakage is allowed for duration of the test.

On request Stafsjö can provide 2.2 test report and 3.1 inspection certificate according to EN 10204.

Face-to-face dimensions

Stafsjö manufacturing standard.

Corrosion protection

Painted valve parts fulfill in applicable areas corrosion protection against environment according EN ISO 12944, corrosivity category C3. Other paint systems can be offered on request.

Service temperature

Information to determine minimum and maximum temperature for the knife gate valve is available on stafsjo.com/support/temperatures/.

²⁾ Up to DN 400 SLF is supplied with a flanged valve body with purge ports: DN 80-DN 200: 1/2", DN 250-DN 400: 3/4". From DN 450 SLF is supplied with a two-piece and fully lugged valve body with purge ports: 1 1/4".

¹⁾ Inlet diameter. 2) Bore diameter.

³⁾ Minimum required face-to-face for installation without load distribution rings. 4) Installed face-to-face without load distribution rings.

⁵⁾ Installed face-to-face with load distribution rings (LDR). When the pipes and flanges are rubber lined or when they do not match up to inlet diameter of the valve or exceed dimension "C" by min. 10 mm up to DN 400 and min. 20 min on DN 450, it is recommended to assemble and install the valve with load distribution rings to ensure long service life and reliable operation. Specifically DN 500 - DN 600 have load distribution rings integrated with the seat.

⁶⁾ Recommended sizing of double-acting pneumatic cylinder type SC at normal operation with 5 bar air supply pressure. For other operating conditions, contact Stafsjö or your local representative for advice.

⁷⁾ Recommended sizing of Auma SA electric motors at normal operation. For other operating conditions, contact Stafsjö or your local representative for advice.

⁸⁾ Valve and Auma SA interface. The electric motors are mounted as standard according to ISO 5210 connection A (rising stem).

⁹⁾ Weight in kg for valve including hand wheel with rising stem, ≥ DN 450 prepared for bevel gear or electric actuator.

Accessories

Lockout pin (1)

For security reason the slurry valves are always supplied with extra holes in the beams and gate to enable lockout in opened or closed position with a locking pin. The locking pin is supplied in stainless steel EN 1.4301.

Accessories

Stem and piston rod protection (2)

The slurry valves can be supplied with a bellow to protect the stem/piston rod from dirt and dust.

Accessories

Load distribution rings (3)

When the pipes and flanges are rubber lined, they do not match up to inlet diameter of the valve or exceed dimension "C", it is recommended to assemble and install the valve with load distribution rings (LDR) to ensure long service life and reliable operation. The load distribution rings are supplied as standard in stainless steel EN 1.4301. Specifically DN 500 - DN 600 have load distribution rings integrated with the seat.
